

# STATE OF THE ART YACHTPANELS

## ALL SUPPLIERS FITTED TOGETHER

A single panel that integrates all essential instruments. No separate elements, just one organised unit.

Various materials, each with their own specific qualities, are available for the production of the panel.

Dimmer lighting  
All information given in a clear and univocal language

Design your own panel

Lighting adjustable to different colours

## PRESENTING THE NEW STATE OF ART YACHTPANELS

THE YACHTPANEL ON YOUR BRIDGE SHOULD BE STATE-OF-THE-ART. A FINE MOTTO, WHICH EBT YACHTPANELS WOULD LIKE TO GIVE SUBSTANCE TO. SUBSTANCE, BECAUSE EBT YACHTPANELS HAS THE EXPERIENCE TO CONCLUDE THAT DESIGN, CREATIVITY, TECHNICAL KNOWHOW AND FLEXIBILITY ENABLE IT TO GIVE EACH YACHT ITS OWN, UNIQUE PANEL.

### Design

The days that a bridge was stuffed full of instruments and panels from different suppliers are well and truly behind us. By integrating all this equipment in a single panel, the information becomes clear, while aesthetics on the bridge are increased. Design is also an important aspect, ensuring the yachtpanel forms a whole with the entire bridge. If you opt for rounded shapes on your bridge, EBT Yachtpanels will translate that to the shapes of the yachtpanel. Design also says something about the organisation of a yachtpanel: logical and organised, fitting within the overall look, based on maximum ergonomics. Design is a specialism, one we have on the basis of knowledge, but certainly also on the basis of experience.

### Creativity

The solution-focused method of EBT Yachtpanels demands a creative approach. Each day we work out which basic material is the most suitable for a specific project, how third-party components will be installed, how we can combine materials, etc. Creativity is a feature needed to make every yacht panel unique and efficient. As such, we go to extremes, yet within the possibilities and qualities of the materials and technology of course, to realise your wishes.

### Technical knowhow

Besides design and creativity, EBT Yachtpanels also knows where it stands from a technical point of view. We effortlessly combine graphic techniques with electrical developments. A good

example thereof is our Smart-line. This concept guarantees high levels of reliability, combined with a unique graphic look. For more information on Smart-line, visit [www.yachtpanels.com](http://www.yachtpanels.com). Some of our technical knowhow comes from solid training, but it is mainly based on our vast experience.

### Flexibility

The term flexibility is sometimes used all too easily. However, practice has taught EBT Yachtpanels that the design, drawing and manufacture of yachtpanels require maximum flexibility. During the design and drawing stages and in the manufacturing stage, EBT Yachtpanels provides room for adjustments. We offer you the flexibility needed to achieve a maximum end result: a customised yachtpanel!
